

## GO GREEN WITH RECYCLED PARTICLE BOARD SUBSTRATE

### D&R Henderson a Leading Sawmill and Board Manufacturer

When it comes to sustainability, through our sawmill in Benalla country Victoria, we recycle over 20,000 Tons per annum of recycled wood. That's over 800 full semi loads of wood product that doesn't go back into landfill.

A 27m high cleaning tower, removes foreign objects to enable us to provide a superior recycled product for a 2nd chance at life.

### Acceptable Wood Types

Soft & Hardwood

- Particleboard & plywood offcuts (max.10%)
- Raw wood or board
- Wood must be clear, dry and free of contaminates

### Melamine & Raw Particle Board Supporting the Furniture Industry with Quality Recycled Board

Whilst White Melamine is popular as a 2 sided prefinished board and economical, we can also offer a range of colours to meet your clients spec.

For many years we have held a deep commitment to maintaining manufacturing processes which are both efficient and environmentally friendly.

There is virtually zero waste in our manufacturing processes, from sawmilling pine timber through to board manufacture and melamine laminating.

## Renewable Resource Mantra

10-20% of the wood used in our production is sourced from post consumer material, a resource which has been diverted from the general waste stream to our recycling facility. Once processed into smaller chips, the material undergoes several cleaning stages across multiple sites to remove impurities before being used in a variety of board products.

Over 70% of our wood is sourced from FSC certified plantations, a practice which supports the sustainable management of plantation pine.

Around 75% of the feedstock for our board products is classed as pre-consumer recycled content. This is a by-product from other manufacturing processes which is diverted into systems for further up-stream product manufacture.
