

birch plus

A new take on Birch plywood, Birch Plus is the Birch look you know and love, but that's not all...

birch plus offers all the benefits of standard Birch plywood with the added benefits of being lightweight and more cost effective. It is suitable in most applications where other appearance-grade plywoods are used, and features long-band faces, multi-ply construction and a black glue line.

While offering added benefits, there is no compromising quality or project aesthetics. **birch plus** is designed to tick all the boxes. Its lightweight nature makes it ideal for use in projects where excess weight is undesirable, most notably in the transport and marine sectors.

It is easy-to-machine and with bright, clean rotary cut Birch faces on a lightweight core, **birch plus** has been developed to be at a lower price point than standard Birch, offering significant financial savings. It is easy to see why we call it **birch plus!**

It is manufactured in Europe by one of the world's leading plywood manufacturers and has been tested against stringent European standards.

Technical details

Density 440 – 490kg/m³
Moisture content 6-14%

- Long-band faces;
- Lightweight 440 – 490kg/m³;
- Low formaldehyde emissions (E1);
