Floorboard

D&R Henderson have been manufacturing, General Purpose & Termite Treated Tongue and Groove Particleboard Flooring since 1987.

Floorboard products incorporate a high concentration wax-resin system, allowing for greater edge protection if sheets are cut. This avoids the need for edge wax sealant.

Floorboard meets all the requirements of the Australian standard AS/NZS1860.1 and is suitable for domestic and commercial installations.

AS1860.2 states that when particleboard flooring is fixed to I-Beam Joists, screws (not nails) be used. I-Beam flanges may only be 35mm thick and nails can potentially penetrate through the bottom cord and not provide sufficient holding strength.

Screwing Floorboard with Quik Drive® systems from Simpson Strong Tie and the WSV Subfloor screw, offers superior clamping force (which means no squeaks) and makes it faster than traditional screw fixing methods.
